

## Upgrade of BTG/Källe-valves

Self acting BTG/Källe valves are common in all industries. Design is more than 50 years old. In today's optimized processes operations, valve might not be as accurate as needed. Also it is not possible to connect to DCS.

Valve bodies are often in good condition. Simple upgrade can then be to fit valve body with pneumatic or electric actuator. Pneumatic diaphragm actuator with digital positioner is a good way to adapt this old valve to modern control and accuracy.

Askalon has great experience of mounting Fisher actuators and FIELDVUE™ digital positioners on a wide range valve brands.
